B)Rectified Ascendant Based on Nakshatra

The birth time rectification has a rational and scientific basis, it has been observed that based on various phases of moon children are born, more or less depending on which phase moon is.

Also in what time phase more of female births would happen or male birth would happen is correlated with the moon phases.

Like 40 minutes after the moon has passed 40 minutes from the lowest meridian the number of births reduces.

IN second of sign Aquarius there is a decrease in the first few degrees of Pisces there is an increase in number of birth.

Similarly the ancient rishis or seers found that Birth of any Individual can happen only on certain specific time. Based which we find out when are the possible times for one to be born.

- **So as a first step we verify, if the time suggested is a time when someone could be born, if not then what is the next time when someone could be born based on present birth time.**

- Then as a second step we check if the horoscope based on the adjusted time the real life events of the person that if they really corroborate with time found.

Birth time is generally before the recorded time as there is a delay in recording and letting the parents know.

C). CONCLUSION:

The given major events match with the rectified birth chart and with reference to matching these events; the rectified birth time could be the correct one.

The rectified ascendant and time =

=so that means 10:43 PM

And rectified ascendant degree = 20:43 minutes 30 seconds Aquarius 16-36-14 lagna

All this would help you in naadi and other predictions.
